Glass Suction Cups

Glass Suction Cups

The single four inch suction cup is wide spread, making it able to grip onto a variety of surfaces and hold on tight. There is an easy release access on the handle as well so you can remove the floor puller once you complete a task. Everything from the materials to the design is well thought out and executed, giving you the best product possible. Start looking into investing in one of our floor pullers. You won't regret it.

Floor Puller Bracket

The Floor Lift-A-Bracket is designed to call attention to itself. Your staff will know where your floor-lifter tool is because they've seen it hanging on the brightly stripped Floor Lift-A-Bracket. The red in the design mimics that of a fire extinguisher or stop sign, so it is guaranteed to catch the eye of one of your workers. When they need a floor-lifter tool, they'll know where to look.

You can purchase a Floor Lift-A-Bracket with or without the floor-lifter tool, depending on your needs. The package deal does provide some savings on the product when compared to buying them individually. You can also purchase it with a carpet puller as well, in case you have carpeted raised floors.

Raised Floor Lifter Tool

Firsttech has taken the lead once again by completely redesigning the original EZ-Lifter. The manufacturer of the aluminum lifter tool handle recently changed the design making it prone to stress and cracking.

We have eliminated that problem with a solid one piece frame construction, giving the EZ-Lifter II unsurpassed strength and durability.

You will not find this item anywhere else because it's manufactured right here at our corporate headquarters in Cliffwood Beach, NJ. Order yours today!

Perforated Tile Puller

Different floor tiles call for different tools. While flat surfaces are easy to manage because they can be attached to a suction cup, perforated floor tiles come with a bit more challenge. FirstTech ®'s Perforated Tile Puller is a must for computer rooms with perforated floor tiles because, it was designed to tackle those specific needs. Standard floor pullers are unable to lift perforated floor tiles because of the inability to trap air for suction. This tool allows for tile extraction by simply hooking and pulling.
